

S3-STATIC WEBSITE

AMAZON S3 STATIC WEBSITE HOSTING

STEPS TO CREATE STATIC WEBSITE :

STEP:1 CREATE A PROJECT FOLDER S3-STATIC-WEBSITE

STEP:2 ADD FILES |> S3-STATIC-WEBSITE |. Index.html |. Car.jpg

Name	Status	Date modified	Type	Size
 car.jpg.jpg		15-05-2026 04:14 PM	JPG File	193 KB
 index		01-07-2026 04:10 PM	Chrome HTML Do...	1 KB

- Personal

ids

nts

STEP:3 OPEN AWS CONSOLE

- Click on create S3 bucket
- Name the bucket (it should be globally unique)
- Untick the block all public access
- Click on create bucket

General configuration

AWS Region

US East (N. Virginia) us-east-1

Bucket type [Info](#)

☒ General purpose

Recommended for most use cases and access patterns. General purpose buckets are the original S3 bucket type. They allow a mix of storage classes that redundantly store objects across multiple Availability Zones.

☐ Directory

Recommended for low-latency use cases. These buckets use only the S3 Express One Zone storage class, which provides faster processing of data within a single Availability Zone.

Bucket namespace

Choose the namespace where you want to create your bucket. [Learn more](#)

☒ Global namespace

By default, S3 creates general purpose buckets in the global namespace.

☐ Account Regional namespace (recommended)

General purpose buckets created in your account Regional namespace are unique to your account. These buckets can never be created by another AWS account.

Bucket name [Info](#)

Bucket names must be 3 to 63 characters and unique within the global namespace. Bucket names must also begin and end with a letter or number. Valid characters are a-z, 0-9, periods (.), and hyphens (-). [Learn more](#)

Copy settings from existing bucket - optional

Only the bucket settings in the following configuration are copied.

[Choose bucket](#)

Format: s3://bucket/optional-prefix

Block Public Access settings for this bucket

Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. In order to ensure that public access to this bucket and its objects is blocked, turn on Block all public access. These settings apply only to this bucket and its access points. AWS recommends that you turn on Block all public access, but before applying any of these settings, ensure that your applications will work correctly without public access. If you require some level of public access to this bucket or objects within, you can customize the individual settings below to suit your specific storage use cases. [Learn more](#)

- ☐
Block all public access

Turning this setting on is the same as turning on all four settings below. Each of the following settings are independent of one another.
- ☐
Block public access to buckets and objects granted through *new* access control lists (ACLs)

S3 will block public access permissions applied to newly added buckets or objects, and prevent the creation of new public access ACLs for existing buckets and objects. This setting doesn't change any existing permissions that allow public access to S3 resources using ACLs.
- ☐
Block public access to buckets and objects granted through *any* access control lists (ACLs)

S3 will ignore all ACLs that grant public access to buckets and objects.
- ☐
Block public access to buckets and objects granted through *new* public bucket or access point policies

S3 will block new bucket and access point policies that grant public access to buckets and objects. This setting doesn't change any existing policies that allow public access to S3 resources.
- ☐
Block public and cross-account access to buckets and objects through *any* public bucket or access point policies

S3 will ignore public and cross-account access for buckets or access points with policies that grant public access to buckets and objects.

Turning off block all public access might result in this bucket and the objects within becoming public

AWS recommends that you turn on block all public access, unless public access is required for specific and verified use cases such as static website hosting.

☒ I acknowledge that the current settings might result in this bucket and the objects within becoming public.

STEP:4 ADD OBJECT IN BUCKET

- Click on upload
- Click on add file
- Choose files

The screenshot displays the AWS Management Console interface. At the top, the navigation bar includes the AWS logo, a search bar, and various service icons. The main header shows the user's name 'Shahbazahmedkhan (615167489280)' and the region 'United States (N. Virginia)'. Below the navigation bar, the 'Amazon S3' console is active. A green notification banner at the top states 'Upload succeeded' with a link to 'Files and folders table'. The 'Summary' section shows the destination 's3://amazon-s3-static-web' and a success summary: 'Succeeded 2 files, 192.6 KB (100.00%)' and 'Failed 0 files, 0 B (0%)'. The 'Files and folders' tab is selected, showing a table with 2 items. The table has columns for Name, Folder, Type, Size, Status, and Error. The items are 'index.html' (text/html, 214.0 B) and 'car.jpg.jpg' (image/jpeg, 192.4 KB), both with a 'Succeeded' status.

aws [Search] [Alt+S]

Amazon S3

Upload succeeded
For more information, see the [Files and folders table](#).

Summary

Destination
s3://amazon-s3-static-web

Succeeded
2 files, 192.6 KB (100.00%)

Failed
0 files, 0 B (0%)

[Files and folders](#) Configuration

Files and folders (2 total, 192.6 KB)

Find by name

Name	Folder	Type	Size	Status	Error
index.html	-	text/html	214.0 B	Succeeded	-
car.jpg.jpg	-	image/jpeg	192.4 KB	Succeeded	-

STEP:5 ENABLE STATIC WEBSITE

- Click on properties section in S3 bucket
- Scroll down and click on edit static website hosting
- Click on enable
- Specify the name of the file
Index.html
- Save changes

Amazon S3 > Buckets > amazon-s3-static-web > Edit static website hosting

Edit static website hosting [Info](#)

Static website hosting

Use this bucket to host a website or redirect requests. [Learn more](#)

Static website hosting

- ☐ Disable
☒ Enable

Hosting type

- ☒ Host a static website
Use the bucket endpoint as the web address. [Learn more](#)
- ☐ Redirect requests for an object
Redirect requests to another bucket or domain. [Learn more](#)

i For your customers to access content at the website endpoint, you must make all your content publicly readable. To do so, you can edit the S3 Block Public Access settings for the bucket. For more information, see [Using Amazon S3 Block Public Access](#)

Index document

Specify the home or default page of the website.

index.html

STEP:6 CREATE BUCKET POLICY

- Go to permission section in s3 bucket
- Click on edit bucket policy
- Create policy

The screenshot shows the AWS Management Console interface. At the top, the navigation bar includes the AWS logo, a search bar, and various service icons. The breadcrumb trail indicates the current location: **Amazon S3** > **Buckets** > **amazon-s3-static-web** > **Edit bucket policy**.

Edit bucket policy Info

Bucket policy

The bucket policy, written in JSON, provides access to the objects stored in the bucket. Bucket policies don't apply to objects owned by other accounts. [Learn more](#)

Bucket ARN
`arn:aws:s3:::amazon-s3-static-web`

Policy

```
1 {
2   "Version": "2012-10-17",
3   "Statement": [
4     {
5       "Sid": "PublicReadGetObject",
6       "Effect": "Allow",
7       "Principal": "*",
8       "Action": "s3:GetObject",
9       "Resource": "arn:aws:s3:::amazon-s3-static-web/*"
10    }
11  ]
12 }
```

Edit statement

Select a statement

Select an existing statement in the policy or add a new statement.

At the bottom of the console, there is a footer with links for CloudShell, Feedback, Console Mobile App, and copyright information for Amazon Web Services, Inc. or its affiliates, along with links for Privacy, Terms, and Cookie preferences.

STEP:7 CHECK WEBSITE IN BROWSWR

- Again click on properties section
- Scroll down
- Click on URL
- Browser open and website ran successfully

Static website hosting
